

Azan Ahmed Khan

MERN Stack Developer · Full Stack Engineer · Karachi, Pakistan

azanahmedkhan.dev@gmail.com · +923161122692 · [linkedin.com/in/azan-ahmed-khan-6126ba3b7](https://www.linkedin.com/in/azan-ahmed-khan-6126ba3b7) · github.com/HafizAzan · azan-ahmed-khan-portfolio.vercel.app

PROFESSIONAL SUMMARY

Results-driven MERN Stack Developer with 1 year of experience architecting and deploying full-stack web applications across SaaS, EdTech, and e-commerce domains. Proficient in React.js, Next.js, Node.js, Express.js, and MongoDB, with production delivery of systems featuring Stripe payment integration, role-based access control, and AWS EC2 cloud deployments. Brings end-to-end ownership from UI implementation and REST API design through to cloud infrastructure and performance tuning.

TECHNICAL SKILLS

Frontend : React.js, Next.js, Vue.js, TypeScript, GSAP, Ant Design, Tailwind CSS, ShadCN UI, Zustand, Redux Toolkit, RTK Query
Backend : Node.js, Express.js, Nest.js, REST API Design, Webhooks, Stripe Integration
Database : MongoDB, PostgreSQL, Supabase, Firebase Firestore & Authentication
DevOps / Cloud : AWS EC2, Vercel, GitHub Actions, Docker, CI/CD Pipelines, Environment Configuration
Tools : Git, Postman, VS Code, RBAC, Performance Optimization

CORE COMPETENCIES

Full-Stack Application Development · REST API Architecture · Stripe Payment & Webhook Integration · Role-Based Access Control (RBAC) · AWS EC2 Cloud Deployment · State Management & Performance Optimization · Database Design (SQL & NoSQL) · Agile Development & Git Workflows

KEY ACHIEVEMENTS

- Delivered **5+ production-grade full-stack applications** within the first year, spanning SaaS, EdTech, e-commerce, and gaming verticals.
- Implemented end-to-end **Stripe payment flows with webhook handling** enabling real-time subscription management and reliable transaction processing.
- Deployed a multi-role SaaS dashboard to **AWS EC2**, managing full infrastructure setup from server provisioning to environment configuration.
- Architected a **multi-tenant POS system** with Manager, Kitchen, and Customer role separation and a real-time in-app chat module via WebSockets.
- Delivered a **client Vue.js project in a single day** against a one-week deadline with Google Sheets API integration, earning strong client referral.

FEATURED PROJECTS

Headland — EdTech Platform

Next.js · TypeScript · MongoDB · Node.js · Express.js · AWS EC2

- Architected a full-stack EdTech platform with separate student and instructor dashboards covering course enrollment, progress tracking, and multi-media content management.
- Built a secure REST API with JWT-based authentication and role-based route guards cleanly separating data access between students, instructors, and admins.
- Deployed to AWS EC2 with full server provisioning and environment configuration, ensuring stable, concurrent-user performance in production.

Lumi — SaaS Platform

Next.js · TypeScript · ShadCN UI · Stripe · Node.js · MongoDB

- Engineered a dual admin/user SaaS dashboard with TypeScript and ShadCN UI, delivering a polished and accessible interface with consistent design across all modules.
- Integrated Stripe with full webhook support for real-time subscription lifecycle handling — plan upgrades, cancellations, and failed-payment recovery flows.
- Designed a modular Express.js backend with multi-tenant data isolation, scalable API endpoints, and environment-based config for staging and production parity.

POS System — Point of Sale (In Progress)

Next.js · Node.js · MongoDB · WebSockets · REST APIs

- Building a multi-role POS system with tailored interfaces for Manager, Kitchen Staff, and Customer personas, each governed by contextual permissions and role-specific workflows.
- Implementing real-time order management and a live chat feature via WebSockets, enabling instant communication between front-of-house staff and kitchen operations.
- Designing an extensible MongoDB-backed API ready to accommodate future modules such as inventory management, daily reporting, and third-party delivery integrations.

Veloura — E-Commerce Platform

React.js · Node.js · MongoDB · FirebaseAuth · Stripe · Redux Toolkit

- Developed a full e-commerce storefront with product catalog, shopping cart, and multi-step checkout integrating Stripe for end-to-end secure payment processing.
- Implemented Firebase authentication with email/password, Google OAuth, and OTP login, plus persistent cart and favorites functionality across user sessions.
- Owned the full development lifecycle from component architecture and Redux Toolkit state management through REST API integration and Vercel deployment.

Noetic Adventure — Browser Game

React.js · FirebaseFirestore · Node.js · GSAP

- Built an interactive word-finding browser game with GSAP-powered animations delivering smooth state transitions and real-time player feedback.
- Implemented full authentication, a live global leaderboard, and a real-time score-ranking engine backed by Firebase Firestore.
- Developed a role-protected admin panel for game content management, player monitoring, and leaderboard controls — secured with RBAC middleware.

FocusFlow — Focus Timer & Productivity App

React Native · Expo

- Developed a productivity-focused mobile app allowing users to create custom focus sessions with configurable timers (Gym, Study, Work modes).
- Implemented countdown-based session system with start/pause/reset functionality to improve user focus management.
- Designed simple and distraction-free UI to enhance concentration and usability during active sessions.

Tic Tac Toe — Mobile Game Application

React Native · Expo

- Built a classic Tic Tac Toe game with interactive UI and real-time state updates for two-player gameplay.
- Implemented game logic for win detection, draw conditions, and board reset functionality.
- Designed responsive mobile layout ensuring smooth gameplay experience across different screen sizes.

Veloura Mobile App — E-Commerce Application (Mobile Version)

React Native · Firebase / Backend APIs

- Developed a mobile version of the Veloura e-commerce platform enabling product browsing, cart management, and checkout flow.
- Integrated backend APIs for real-time product data synchronization and user session handling.
- Focused on smooth mobile UX with optimized navigation and performance-driven UI rendering.

ADDITIONAL PROJECTS

AI Agent System

Built an AI-powered agent app integrated with a large language model API for automated task execution and contextual query handling using Next.js and Node.js. Supports multi-turn conversations with optimized prompt pipelines for accurate, real-time AI responses at scale.

Pixel Pulse

Delivered a Vue.js client project with Google Sheets API integration in a single day against a one-week deadline, demonstrating exceptional delivery speed. Features dynamic data binding, real-time spreadsheet sync, and a fully responsive UI that exceeded client expectations.

Oasis

Developed a performance-focused, SEO-optimized business landing page for a software house using Next.js SSR and static generation. Prioritized Core Web Vitals, accessible markup, and GSAP scroll animations to maximize user engagement and organic search visibility.

BlogPlatform

Built a full-stack blog with Firebase authentication, post-category management, and a rich-text editor for content creation. Integrated REST APIs for post retrieval and a React admin dashboard with full CRUD operations and real-time Firestore sync.

Amplify

Developed a production-quality Next.js landing page as the first professional assignment, built with Tailwind CSS and clean component architecture. The project directly led to a formal internship offer, demonstrating strong onboarding speed and front-end delivery quality.

EDUCATION

Intermediate Certificate — Computer Science

Expected: 2026

Defence Higher Secondary School (ZUEB)— Karachi, Pakistan

Relevant coursework includes Computer Science fundamentals, data structures, and programming. Complemented formal education with intensive self-directed study in full-stack web development, cloud deployment, and modern JavaScript frameworks — applied directly to production projects.
